DETAILED ACTION

Election/Restrictions

A. This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

The species are as follows:

1. A disorder selected from the group consisting of: sunburn, inflammation, skin aging, skin cancer, and a disorder associated with apoptosis.
2. A pharmaceutically acceptable carrier selected from the group consisting of: liposomes, ointments, oils, crèmes, emulsions, and dispersions.

Applicant is required, in reply to this action, to elect a single species to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

B. The claims are deemed to correspond to the species listed above in the following manner:

1. The species of disorders corresponds to claims 3-4.
2. The species of pharmaceutically acceptable carriers corresponds to claim 12.

The following claim(s) are generic: claims 1-2 and 11.

C. The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical features for the following reasons: The claims are drawn to a method of preventing or treating a disorder of the skin associated with damage induced by UV-radiation, wherein said method comprises administration of an effective amount of interleukin (IL)-18, and specifically, wherein the disorder is selected from the group consisting of sunburn, inflammation, skin aging, and skin cancer.

Nagai *et al* (*J. Invest. Dermatol.*, 2002, 119:541-548 – cited in the IDS received on 11/18/2005) discloses gene transfer-mediated administration of IL-18 to mice with melanoma. Specifically, Nagai *et al* show that melanoma cells transfected with a vector encoding IL-18 produced IL-18 *in vivo* when transferred to syngeneic mice and inhibited tumor growth (see abstract, p. 543-544). Given the broadest reasonable interpretation, the disclosure of Nagai *et al* can be interpreted as a method of administering IL-18 to a subject suffering from a disorder associated with UV-radiation, specifically melanoma (skin cancer). Thus, the species of UV disorders lacks a single general inventive concept that makes a contribution over the prior art, as set forth under PCT Rule 13.1.

D. Applicant is also advised that the reply to this requirement, to be complete, must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

E. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
